

Project Performance Test

Date	02 July 2026
Team ID	SWTID-2026-7871
Project Name	India's Agricultural Crop Production Analysis
Maximum Marks	

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Dataset containing India's Agricultural Crop Production data from 1997–2021 was successfully imported and rendered in Tableau. Total records analyzed: Agricultural production data across multiple states, crops, seasons, and years. 
2.	Data Preprocessing	The dataset was pre-validated and contained no significant missing values or inconsistencies; therefore, no additional preprocessing was required.
3.	Utilization of Filters	Interactive filters implemented: State Filter, Crop Filter, Season Filter, and Year Filter. These filters enable dynamic analysis and dashboard interaction.
4.	Calculation fields Used	calculated fields created include: SUM(Production), SUM(Yield), Total Production KPI, Total Yield KPI, Top Crop Ranking, and Percentage Distribution calculations.
5.	Dashboard design	No. of Dashboards: 3 No. of Visualizations/Graphs: 9 Includes KPI Cards, Line Chart, India Map, Horizontal Bar Charts, Grouped Bar Charts, Pie Chart, and Donut Chart. Dashboard 1:

		
		Dashboard 2: 
		Dashboard 3: 
6	Story Design	No. of Story Points: 6 Story points were created to present agricultural trends, state-wise analysis, seasonal analysis, crop performance, and decision-making insights. The story Points are: Project Objective:

This project analyzes India's agricultural crop production data from 1997 to 2021 using Tableau's visualization, dashboards, and stories.	This dashboard helps farmers identify high-performing crops, seasonal trends, and production patterns to support crop selection and maximize their farm's output.	This dashboard enables policymakers to analyze regional production patterns, identify top-performing areas, and support effective agricultural interventions.

INDIA'S AGRICULTURAL CROP PRODUCTION ANALYSIS (1997-2021)
Project Chintan

Project Objective:

- Analyze agricultural production trends.
- Study seasonal and regional variations.
- Support farmers, government, and investors.
- Develop interactive dashboards using Tableau.

- Crop Selection and Seasonal Analysis(Dashboard 1)
- Government Agriculture Policy (Dashboard 2)
- Agribusiness Investment Analysis (Dashboard 3)
- Key findings:

This dashboard enables policymakers to analyze regional production trends, identify low-performing areas, and support effective investment decisions.

Key Findings

- ✦ Rice and wheat contribute the highest agricultural production.
- ✦ Uttar Pradesh is among the top-producing states.
- ✦ Kharif and Rabi seasons dominate crop production.
- ✦ Agricultural production has increased over the years.
- ✦ Certain states show higher agricultural productivity.

- Conclusion:

Conclusion

The analysis reveals significant variations in crop production across states, seasons, and years. Tableau visualizations provide valuable insights for farmers, policymakers, and investors, enabling data-driven decision-making and supporting the growth of India's agricultural sector.
